

SOUND CONTROL TECHNOLOGIES

SCM-4 CEILING MICROPHONE

Products from SOUND CONTROL TECHNOLOGIES cover a very broad range of applications, from integrated Teleconferencing units, Cross Point audio matrixes, VOICELIFT™ Voice Articulation systems, flush-mount ceiling microphones and rigid extension microphones. The following information is a brief overview of our SCM-4 rigid extension ceiling microphones.

These microphones are available in custom lengths starting at six inches. The basic premise of these microphones is to bring the working element of the microphone down from high ceilings to a comfortable height to reduce room reverberation and ambient noise picked up by microphones mounted in high ceilings.

The SCM-4 uses a cardioid microphone element to achieve some rear cancellation of noise and reverberation while maintaining an effective omni-directional coverage pattern in the working space of the conference environment.
